

The ground is as hard as concrete, full of rocks the size of basketballs, the builders have left rubble everywhere and the turf is on the way....

Welcome to Harley Country!

No attachment is more versatile, productive, or will generate as much income as a Harley Powered Rake.

Able to clear building sites of rubble, rocks and debris, remove grass from established areas, grade and rejuvenate gravel roads, create fire breaks, level house blocks, spread and incorporate amendments, maintain freeway batters the list of applications is endless.

The Harley Powered Rake quick connects to all makes and models of skid steer loader and with working widths from 4 to 8 feet there is a model for every application and any sized skid steer loader.

The hydraulically powered rotor with solid carbide

teeth cleans the site, windrowing materials while cultivating and leveling the soil ready for seed or turf.

All this completed in a single pass and on an average house block in around 30 minutes.

Equally effective in preparing extremely hard ground as well as wet and boggy areas the Harley Powered Rake is an attachment for any operator involved in site clearance or soil preparation and will greatly enhance the profitability of your skid steer loader.

PROFIT
from your
SKID STEER
INVESTMENT!

- For anyone involved in site clearance and soil preparation

- 4 models from 6 to 8 foot width

30 minute site preparation

..... After

..... Before

See the Harley in action by calling for a copy of your free CD Rom and information kit, or by organising your on site demonstration.

Never wheelbarrow or pump concrete again!

The Harley Concrete Chuter is the original design for carrying and placing concrete with a skid steer loader, enabling quick clean and accurate placement of cement. Ideal for backyard patios, pools or for pouring into formed columns or walls the Concrete Chuter fits most makes and models of skid steer loader and is particularly helpful in hard to access sites where concrete mixers cannot go.

The Concrete Chuter is easy to use, with the hydraulic dispensing door controlled from the skid steer, and with uniquely designed safety features is completely inaccessible to co workers which prevents accidental injury to those assisting in spreading and troweling.
